

ABSTRACT

An apparatus may be used to dispense a plurality of automotive appearance care products. The apparatus may include a plurality of storage containers. Mixing systems may be coupled to the storage containers. The mixing systems may combine raw materials with a carrier fluid to produce product fluids. The product fluids may be stored in storage vessels. A plurality of pumps may be used to produce a flow of one or more product fluids. The product fluids may be dispensed through one or more dispensing conduits. In certain embodiments, a user of the apparatus may be charged a fee based on a selected basis. The selected basis may be, but is not limited to, a per vehicle basis, a per application basis, a per use basis, a per refilling basis, or a per time basis.
